

Internal airtightness

Insulation between rafters

External roof insulation

Roof refurbishment from the outside

Reliable solutions for sealing building envelopes

Internal airtightness system

Vapour check and airtight membranes with humidity-variable diffusion resistance provide the best protection against moisture and mould-infested components. In combination with moisture-active windtightness membranes on the exterior, they significantly improve the energy efficiency and protection of building components and facilitate a healthier, mould-free indoor environment.

20 JAHRE INTELLO®

Simple · Reliable · Proven in service

Humidity-variable airtightness with INTELLO® and INTELLO® PLUS

Maximum protection against mould and moisture damage to structures

Note

With intelligent membranes from pro clima, winter building sites are not a problem! With their high hydrosafe value, they keep building components dry – even if there is a lot of moisture arising from new building work in winter.

proclima.info/en/winter-building-sites

pro clima makes it possible!

Independently certified airtightness

pro clima INTELLO and INTELLO PLUS are the first humidity-variable airtightness membranes in the world with independent certification of their durability. This has also been confirmed again by a European Technical Assessment (ETA-18/1146) by the German Institute for Construction Technology (DIBt). This is further evidence of the high-quality performance of the humidity-variable behaviour, which provides reliable protection for building components over a period of at least 50 years. With this independent confirmation of the humidity-variable performance, project planners and installers can use INTELLO and INTELLO PLUS to implement reliably protected structures with humidity-variable vapour check membranes.

- ✓ Independently demonstrated durability thanks to ETA-18/1146
- ✓ Protection against moisture damage: reliable planning and implementation of building structures
- ✓ Roofs, walls, ceilings and floors
- ✓ Use class O, without chemical wood preservation
- ✓ Reliable performance and quality

Humidity-variable airtightness membranes with independent ageing testing (ETA-18/1146) allow for reliable planning and implementation of building structures.

Adhesion for 100 years – Reliable adhesion that lasts as long as the building component itself!

The adhesive bonds created when implementing the interior airtightness and exterior windtightness layers must be reliable and durable. This applies both to the overlaps of membranes with one another and also to the joints between membranes and any penetrations or adjacent building components. Adhesion is important because these two sealing layers ensure that the thermal insulation structure will perform effectively and, at the same time, is protected against mould and moisture damage. And everything should of course continue to work properly in the long term – ideally for the entire service life of the building component, meaning at least 50 years. There is large variability in terms of the quality levels that can be found on the marketplace – unfortunately including some products that are barely fit for purpose.

But how can you identify a good adhesive tape? To provide even more reassurance in this regard, we have had the pro clima adhesive tapes TESCON VANA, TESCON No.1, UNI TAPE and the ORCON F joint adhesive tested independently by the University of Kassel in Germany. These four pro clima adhesive products are the only products that have demonstrated 100 years of adhesive performance in these tests. This is a unique achievement for all products worldwide. As a result, building structures are better protected in the long term.

100 YEARS ADHESION

✓ successfully tested
✓ unique worldwide

TESCON VANA · TESCON No.1 · UNI TAPE · ORCON F

proclima.com/100years

Reliable even in the presence of moisture

Vapour check or underlay membranes can easily become damp or even properly wet during installation. Rain or the formation of condensation on building component surfaces are unavoidable features of everyday reality on building sites. Anybody who doesn't wish to compromise in terms of the durability of adhesive bonds or the practicalities of installation procedures should opt for TESCON adhesive tapes. The water-resistant pro clima SOLID acrylate adhesive guarantees reliable adhesive bonds for both interior and exterior applications – even in damp or wet conditions.

More information on this topic:

Reliable adhesion – How do adhesives work?
proclima.info/en/reliable-adhesion

Reliability even in damp or wet conditions

The water-resistant SOLID adhesive ensures quick and permanent joints with the subsurface – for both interior and exterior applications. The joints created are immediately sealed and can be subjected to loading. This facilitates:

- Reliable airtightness even with increased humidity – as typically encountered during the construction phase as a result of plastering or the installation of screed
- Reliable windtightness on roofs and facades, even in rainy weather or wet conditions

Water-resistant SOLID adhesive

vimeo.com/503067958

TESCON VANA is being stuck to a piece of SOLITEX MENTO roofing underlay membrane under water here! When a mechanical load is applied as a test, the fleece layer of the underlay membrane tears internally ('failure of the substrate'). The adhesive bond itself is still intact.

Quicker reliable sealing with pro clima connect technology

- ✓ Bond based on the adhesive-on-adhesive principle
- ✓ Adhesive surfaces protected against dust and dirt by release films
- ✓ The adhesive bond is extremely strong and secure immediately – even in wet conditions, as adhesive has already penetrated into the fleece.

pro clima connect technology is also available on

- External sealing systems for roofs and walls as part of the SOLITEX series
- The DA airtightness system for external roof insulation

vimeo.com/503096028

Insulation in the supporting structure, e.g. with the

INTELLO® PLUS / INTELLO® system

Reinforced / hydrosafe® high-performance vapour check, suitable for all fibrous insulation mats and boards (INTELLO PLUS: including blown-in insulation)

Areas of application:

For use on roofs, walls, ceilings and floors on structures that are open or closed to diffusion on the exterior, e.g. flat/steep roofs and green roofs, after appropriate design calculations have been carried out.

Advantages:

- ✓ Best possible protection against moisture damage to structures and mould because this product is humidity-variable with a variation of a factor of over 100
- ✓ INTELLO PLUS: Test winner in April 2012 with the German product-testing foundation 'Stiftung Warentest'
- ✓ Permanent protection: officially tested and certified performance (ETA-18/1146)
- ✓ Protected winter building sites thanks to hydrosafe® behaviour
- ✓ Can be combined with all fibrous insulation mats and boards (INTELLO PLUS: including blown-in insulation)

Technical specs:

DB+
Reinforced hydrosafe® vapour check made of building paper

Insulation over the supporting structure, e.g. with the

INTELLO® X PLUS / INTELLO® X system

Reinforced / hydrosafe® high-performance vapour check

Areas of application:

Versatile range of applications: can be used directly on top of sheathing underneath over-rafter insulation, on the inside on between-rafter insulation and, in the case of refurbishment from the outside, between two mineral wool insulation layers. INTELLO X can also be used in areas where the membrane will be permanently exposed to diffuse UV light, such as areas without inner cladding. INTELLO X membranes can be used on structures that are diffusion-open to the outside or are diffusion-tight, e.g. flat/pitched roofs and green roofs, after appropriate design calculations have been carried out. The reinforced INTELLO X PLUS is ideal for the use of blown-in insulation materials.

Advantages:

- ✓ Excellent protection against mould and moisture damage to structures thanks to humidity-variable diffusion resistance
- ✓ Can be combined with all fibrous insulation mats and boards (INTELLO X PLUS: including blown-in insulation)
- ✓ Easier handling: can be used with insulation installed between rafters, with external insulation and – in the case of refurbishment from the outside – between two layers of insulation
- ✓ Protects building structures against weathering during the construction phase for roof pitches of 10° (2.1:12) and higher

Roof refurbishment from the outside, insulation covering with wood fibre

DASAPLANO 0,01 connect system

Highly diffusion-open airtightness membrane

Areas of application:

For use as an airtightness membrane that can be subjected to outdoor exposure for roof refurbishment from the outside in the case of full packing of the existing spaces between the rafters with insulation. Installation across the rafters, underneath an additional layer of over-rafter insulation consisting of wood-fibre underlay panels. Please contact Technical Support at pro clima in Germany for assistance with calculating the thickness of the external wood-fibre insulation that is required from a building physics viewpoint.

Advantages:

- ✓ Simple implementation of the airtight layer: installation across rafters and insulation
- ✓ Dry and reliably protected building components thanks to active moisture transport
- ✓ Protection during the construction phase: suitable as a temporary covering
- ✓ Quick and reliable bonding thanks to the integrated 'connect' self-adhesive strips on the long edges of the membrane
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

Supply forms:

Length: 50 m (164'); width: 1.50 m (4' 11")

Roof refurbishment from the outside, insulation with mineral wool

INTELLO® X PLUS / INTELLO® X system

Reinforced / All-round hydrosafe® high-performance vapour check

Areas of application:

For use as a refurbishment vapour check and airtightness membrane over the existing rafter roof structure between two layers of mineral wool insulation in combination with a diffusion-open roofing underlay (e.g. SOLITEX MENTO 3000). Please contact Technical Support at pro clima in Germany for assistance with calculating the thickness of the external mineral wool insulation that is required from a building physics viewpoint. The humidity-variable INTELLO X airtightness and vapour check membrane can also be used on the inside of insulation installed between rafters or wall framework with all fibrous insulation mats and boards, or directly on top of sheathing underneath exterior insulation with all fibrous insulation materials. In these cases, it can be used in combination with building component layers that are diffusion-open to the outside or are diffusion-tight, e.g. pitched, flat or green roofs, after appropriate design calculations have been carried out.

Advantages:

- ✓ Excellent protection against mould and moisture damage to structures thanks to humidity-variable diffusion resistance
- ✓ Easier handling: can be used with insulation installed between rafters/framework, with external insulation and – in the case of refurbishment from the outside – between two layers of mineral wool insulation
- ✓ Protects building structures against weathering during the construction phase for roof pitches of 10° (2.1:12) and higher
- ✓ Protected winter building sites thanks to hydrosafe® behaviour
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

Typical cross-section:

Refurbishment solution:

Between-rafter and over-rafter insulation both mineral wool.

- 1 Roofing underlay membrane e.g. pro clima SOLITEX MENTO 3000
- 2 **Over-rafter insulation, mineral wool**
- 3 INTELLO X / connect / INTELLO X PLUS
- 4 **Insulation between rafters/framework, mineral wool**
- 5 Service cavity, if necessary
- 6 Inner cladding

The thickness of the external mineral wool insulation needs to be calculated on a project-specific basis. Please contact Technical Support at pro clima in Germany for assistance.

Roof refurbishment from the outside, insulation covering with foam insulation

DA connect system

Vapour check membrane for external roof insulation and roof refurbishment from the outside

Areas of application:

For use as an airtightness membrane and refurbishment vapour check between two layers of insulation. All fibrous insulation materials can be used for the insulation installed between rafters; the external roof insulation must be a foam insulation material (e.g. PUR or PIR). Please contact Technical Support at pro clima in Germany for assistance with calculating the thickness of the external foam insulation that is required from a building physics viewpoint. If necessary, the outer sealing layer should be implemented using a diffusion-open roofing underlay membrane (e.g. SOLITEX MENTO 3000). DA can also be used as a vapour check and airtightness membrane directly on top of roof sheathing underneath suitable external roof insulation made of all insulation materials on structures that are open to diffusion on the exterior (roofing underlay with SOLITEX MENTO 3000, for example).

Advantages:

- ✓ Protects building structures against weathering during the construction phase for roof pitches of 10° (2.1:12) and higher
- ✓ Water-resistant and waterproof, can be walked on
- ✓ Acts as a vapour check and airtight layer simultaneously
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

Membrane		Polypropylene
Surface weight	EN 1849-2	130 g/m ² ; 0.43 oz/ft ²
s _d value	EN 1931	2.30 m
g value		11.5 MN-s/g
Outdoor exposure		3 months
Outdoor exposure for refurbishment betw. 2 insulation layers		14 days ; 7 days at ≤ 10 °C (≤ 50 °F)

Supply forms:

Length: 50 m (164'); width: 1.50 m (4' 11"); available with or without self-adhesive strips.

Roof refurbishment from the outside, 'sub-and-top' also possible without insulation covering

DASATOP® system

Refurbishment vapour check for 'sub-and-top' installation from the outside

Areas of application:

Suitable as a 'sub-and-top' vapour check and airtightness membrane for all structures with diffusion-open roofing underlay membranes (e.g. pro clima SOLITEX). Also suitable in combination with wood-fibre underlay panels and MDF panels, and with fleece-laminated foam insulation materials (PUR, PIR, EPS etc.) with a thickness of 50 mm (2") and greater.

Advantages:

- ✓ Best possible reliability thanks to 'sub-and-top' installation
- ✓ Protects building components: humidity-variable sd value allows for installation into the spaces between rafters and over the tops of the rafters
- ✓ Time-saving installation: no adhesion to rafters required
- ✓ No insulation cover necessary
- ✓ Easy to work with: particularly robust thanks to fleece reinforcement
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

Temperature resistance		permanent -40 °C to 80 °C ; -40 °F to 176 °F

Supply forms:

Length: 50 m (164'); width: 1.50 m (4' 11"), 3.00 m (9' 10")

Liquid sealants

AEROSANA VISCONN

Sprayable airtightness sealant with humidity-variable water vapour permeability, blue/black

Areas of application:

For use as a humidity-variable vapour check and airtight layer that can be applied as a spray or using a brush on wall, ceiling and floor surfaces, such as non-plastered masonry or porous panel-form materials – both indoors and outdoors. Also suitable for building component joints and for strengthening subsurfaces on renovation projects.

Advantages:

- ✓ Time-saving and can be applied in versatile ways: spraying with an airless sprayer or AEROFIXX (compressed air), paint on.
- ✓ Reliable structures thanks to excellent adhesive properties on all standard construction surfaces
- ✓ Covers cracks and joints of up to 3 mm (1/8") width. Larger joints can also be covered in combination with AEROSANA FLEECE.
- ✓ For robust building components: permanent elasticity and high durability once it has dried
- ✓ Improves surfaces: forms a bonding course between subsurfaces and subsequent coatings
- ✓ Can be plastered / painted over, pro clima adhesive tapes can be stuck onto it
- ✓ Flexible use in indoor and protected outdoor areas thanks to its humidity-variable s_d value
- ✓ Excellent values in hazardous substance testing, has been tested according to the ISO 16000 evaluation scheme

Many possible applications:

Airtight spraying over angle brackets,

... joints at double collar ties that are difficult to access,

... joints between wood-based panels,

... window joints,

... unplastered walls, and

... for challenging refurbishment situations.

Support and advice on technical issues

Quick answers relating to building physics, construction, systems or products. Our engineers from the field of Timber and General Construction can help you quickly and simply in an expert manner and help you find solutions for cost-effective, reliable constructions that will create healthy living environments.

Phone: +49 (0) 62 02 – 27 82 45
E-mail: support@proclima.com
proclima.info/en/technical-support

Technical support

- ✓ Quick answers to your questions relating to building physics
- ✓ Engineers from pro clima's Application Technology department can help you with their specialist knowledge
- ✓ Evaluation of structures and designs
- ✓ Advice on applications and use of systems and products
- ✓ Evaluation and approval of structures and components

Component tests and building physics assessments

Feel free to contact us with your questions on the moisture-related evaluation of components. We can check and evaluate your building components – including flat-roof structures with complex building physics behaviour – and provide reassurance in terms of your liability as an advisor.

- ✓ Quick, free-of-charge evaluation of the moisture-related behaviour of components
- ✓ Greater reassurance and reduced liability for your advice services
- ✓ Testing and evaluation with building physics software from the Fraunhofer Institute for Building Physics
- ✓ Walls, floors/ceilings, pitched roofs
- ✓ Also for structures with complex building physics behaviour, e.g. flat roofs

Detailed CAD drawings

All drawings are available for download at:
proclima.info/en/cad-drawings

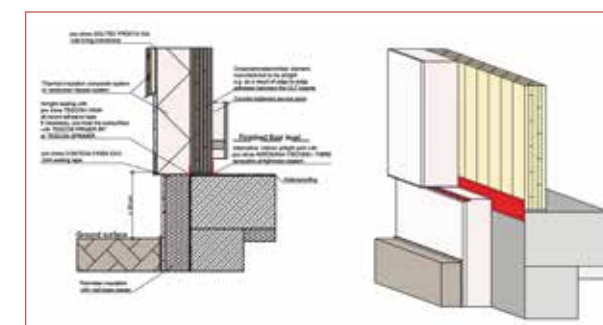

The pro clima database of CAD detail features provides you with a range of suggested solutions for planning and implementing your construction projects. Drawings showing how to achieve airtightness and windtightness at detail features are available to be downloaded for free in the form of DWG files, DXF files or PDF files. The drawings are grouped by construction type (timber frame and solid timber construction) and by the type of details – for example: base joints, component transitions, pitched roofs, flat roofs, windows and penetrations. A number of variants are available for many of the construction situations.

Timber Frame Construction detail features

Solid Timber Construction detail features

The pro clima mini-max principle

Maximum versatility with our core system products

The pro clima core system consists of just these few products. With these products, you will have a reliable solution available to you for almost all your construction needs. And if you have to contend with special requirements, you can always make use of pro clima's full range.

You can depend on us – pro clima warranty

You can count on the quality, durability and reliability of the pro clima system. In the unlikely event of problems, we will support you with our comprehensive, transparent and fair warranty:

- ✓ **Comprehensive support if damage should occur**
- ✓ **Warranty period within the pro clima system is twice as long as the statutory requirement**
- ✓ **Including removal, disposal, replacement materials and new installation**

We provide the following warranties for the pro clima airtightness system and for individual pro clima construction products in combination with all approved thermal insulation materials and for the SOLITEX system for pitched roofs and external walls:

10-year warranty

... if products are installed solely in combination with pro clima standard products, insofar as products are available within the pro clima system for the relevant application.

6-year warranty

... if the products are installed in combination with products from third parties.

The benefits for you:

- ✓ Exact coordination of products with one another and with the relevant subsurfaces.
- ✓ Selection of bonding products is easy within the pro clima range.
- ✓ 95% of pro clima products are installed on the building site within three months of being supplied by traders.
- ✓ Warranty claims arising from purchase contracts for construction materials and building components generally expire after five years.
- ✓ pro clima offers a system warranty of up to 10 years, which means you can really depend on us!

The complete scope of this warranty can be found here:
proclima.com/products/system-warranty

CAMPUS RO, Rosenheim, Germany

211 apartments in hybrid timber frame construction

Construction period: July 2020 to January 2022

Reliable system solutions for sealing building envelopes

Moisture-activated wind-sealing

Highly diffusion-open, moisture-activated roofing underlay and breather membranes with pore-free TEEE membrane layers. The best quality for reliable structures that are free of mould and moisture damage to structures for roofs and walls.

Refurbishment made easy

DASAPLANO combines ease of installation with reliability in service.

Airtightness system for roof refurbishment from the outside.

Practical solutions for window joints

Intelligent sealing tapes create reliable, durable joints between windows/doors and walls. Sealing systems tested by the IFT (Institute for Window Technology) in Rosenheim, Germany, for interior use, exterior use and sub-sill flashing.

pro clima adhesive technology creates reliable, durable joints both indoors and outdoors.

Dependable adhesive tapes with water-resistant SOLID acrylate technology, solvent-free adhesives and primers, grommets/gaskets and solutions for detail features.

Your pro clima partner
